

## Customer Testimonials

Independent customer survey prepared by the University of East London, under the Eureka Project

Ms. Roberts of Animal Crackers, Basildon installed a 2.96 kilo-watt system

*“My energy bills had been creeping up and up and I’d done a lot of research about solar energy - the returns seem to be better than having my money in the bank! ING Solar came along to quote and they knew exactly what they were doing which was great. When it came to the installation, I really couldn’t fault their work – they were quiet and polite - I could hardly tell they were up there. Even the man from the council commented what a nice neat job they had done and you can’t get a higher recommendation than someone from the council saying that!”*

Mr. Smith of Chelmsford  
installed a 3.6 kilo-watt system

*"I'm expecting to get a cheque for over £300 for the first 90 days! My solar panels have cut my mains consumption by just over 50% - I went back over my bills from last years to check the figures. So solar seems like a better investment than any other investment at the moment to me. ING Solar were great. The chap who came to do the quote for me didn't do the hard sell he just gave me the facts. During the installation the ING Solar team were very efficient and so meticulous – they checked and double checked everything. I'm a very satisfied customer!"*

Mr. Sharan of Hertfordshire  
installed a 3.6 kilo-watt system

*"I'd heard about feed-in tariffs then researched it all on the internet and concluded solar was a great investment. ING Solar did a fantastic job, they were punctual, professional and the wiring was top notch. It's on track to be the investment I expected being a 9% return on my money – all tax free and inflation linked!"*

Mr. Weller of Essex  
installed a 2.16 kilo-watt system

*“ING Solar were great, and I have no criticism of their work whatsoever – it’s like those advertisements ‘what you see on the tin - they delivered’. My money was doing nothing in the bank, so I thought I might as well invest it to panels on the roof! I got ING Solar around and they were so polite, upfront and didn’t have a heavy sales pitch. They showed great respect for us and our property. Even better, a cheque for over £500 from the Feed in Tariff scheme, just for the first 6 months is on its way!”*

Mr. Newton of Epping  
installed a 3.7 kilo-watt system

*"I can't sing ING Solar's praises highly enough.  
The installation team were very professional  
and the project went exactly to plan with a  
very neat end result.*

*I'm keeping a log and so far the results are  
easily exceeding expectations with the  
estimated half year total between mid-summer  
(21st June) and mid-winter (21st December)  
being passed as early as 23rd October. As a  
result this is likely to be the best  
investment that I have ever made, and I have  
already recommended ING Solar to a number  
of close friends."*

Mr. Elson of Thurrock  
installed a 3.96 kilo-watt system

*"I'd been interested for some time in solar energy and I'd done the research on the feed-in tariffs, so I knew it was going to be a good investment. ING Solar seemed very knowledgeable and they had the accreditation that I was looking for. They were very professional and helpful right from the start to the end of the project! The team were great and always kept things tidy around the house which is quite a difficult thing to do with a building project."*

Mr. Guest of Essex  
installed a 2.22 kilo-watt system

*“I already had thermal panels installed 3-4 years ago and had checked out the effectiveness of these so with the feed-in tariffs going to solar was a ‘no brainer’! I had a lot of confidence in them – they really knew what they were doing, were very professional and the installation was painless. “*

Mr. Ward of Colchester  
installed a 3.6 kilo-watt system

*“I see solar as a good investment, it adds value to my house and of course if enough people install solar panels it will be good for the environment overall. When it came to the installation, ING Solar were very efficient and really knew what they were doing. In 70 days one third of the target output for the whole year has been achieved! I’ve just made a written recommendation to my sailing club to go ahead with an installation from ING Solar – they were excellent and really deserve to succeed.”*
